

MMDHD New Daily COVID-19 Confirmed Cases

This graph displays the COVID-19 laboratory-confirmed cases for the Mid-Michigan District Health Department including Clinton, Gratiot and Montcalm Counties in Michigan. It includes three special dimensions:

- The bar across the top distinguishes cases that have most-likely recovered from those that are most-likely still ill using an algorithm used by most states.
- The bar on the left side indicates how cases correspond to MDHHS’s risk levels. Use the 5-day average (see the legend) to tell which risk level our district is in at each point in time.
- Deaths are indicated by the dots at the top of the graph and are color-coded to match the counties in the legend.
