

# Michigan Flu Focus

Weekly Influenza Surveillance Report

January 20, 2023

Vol. 20; No. 14

Week Ending January 14, 2023 | WEEK 2

Editor: Sue Kim

Editor email: [KimS2@michigan.gov](mailto:KimS2@michigan.gov)

Data provided in this report are preliminary and will be updated as additional data are received

## Updates of Interest

Nationally, seasonal influenza activity continues to decline across the country. CDC estimates that, so far this season, there have been at least 25 million illnesses, 270,000 hospitalizations, and 17,000 deaths from flu.

Please see CDC's [FluView](#) report for more information.

### Seasonal Flu Vaccination Coverage

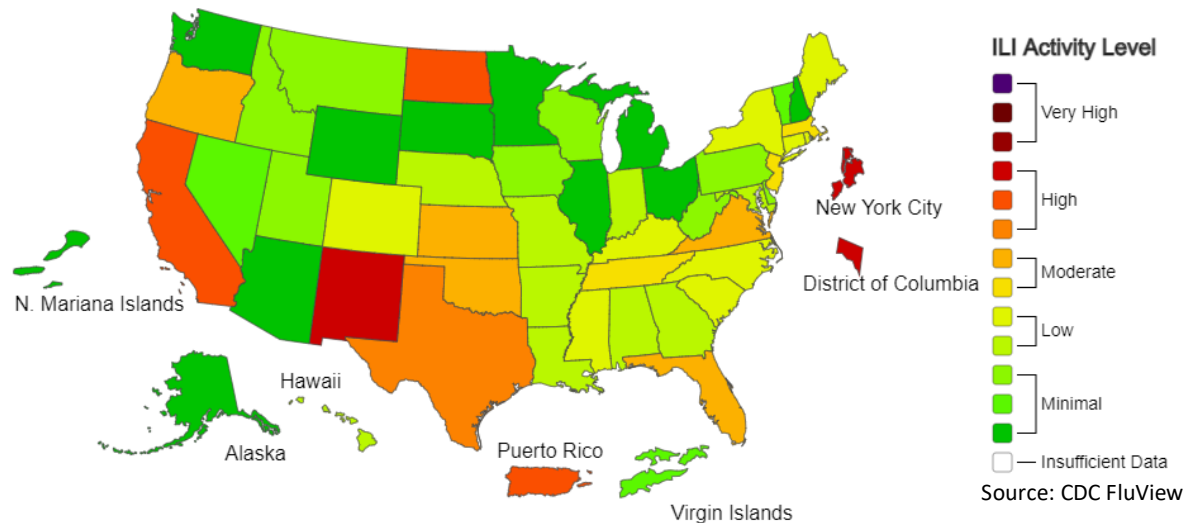

Michigan's goal is to vaccinate **4 million** residents during the 2022-2023 flu season.

As of **January 14, 2023**, there have been **2,982,080** doses administered (**74.6%** towards goal) for the 2022-2023 flu season.

Please visit the Flu Vaccination Dashboard at [www.michigan.gov/flu](http://www.michigan.gov/flu) for more info.

### Outpatient Respiratory Illness Activity Map Determined by Data Reported to ILINet

This system monitors visits for respiratory illness that includes fever plus a cough or sore throat, also referred to as ILI, not laboratory confirmed influenza and may capture patient visits due to other respiratory pathogens that cause similar symptoms.  
2022-23 Influenza Season Week 2 ending Jan 14, 2023

Note: This map represents U.S. ILI activity levels reported to ILINet. The display used in past seasons showing Geographic spread of influenza has been suspended for the 2022-2023 influenza season

## Influenza-associated Pediatric Mortality

Nationally, 85 influenza-associated pediatric deaths have been reported for the 2022-2023 flu season.

No pediatric deaths have been confirmed by MDHHS for the 2022-2023 flu season to date.

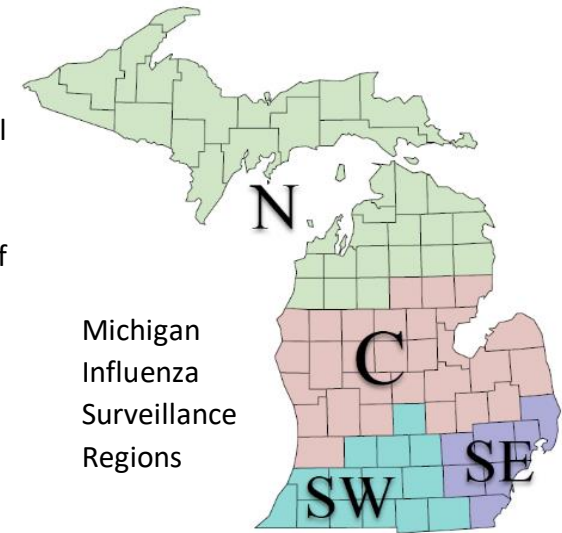

## U.S. Outpatient Influenza-like Illness Surveillance Network (ILINet)

Michigan participates in ILINet, a collaborative effort between the CDC, state and local health departments, and volunteer sentinel clinicians as part of Michigan’s influenza surveillance. ILINet provides data on the total number of outpatient visits to health care providers seen for any reason and the number of those patients with influenza-like illness (ILI<sup>‡</sup>). Participating Michigan emergency department and urgent care facilities send syndromic data voluntarily in near real-time to the Electronic Surveillance System for the Early Notification of Community Based Epidemics (ESSENCE). Discharge diagnosis and chief complaint data elements are used to determine whether visits meet the ILI case definition. One-hundred and forty-one (141) Michigan facilities contributing data to ESSENCE were validated and enrolled in ILINet starting the 2021-2022 flu season.

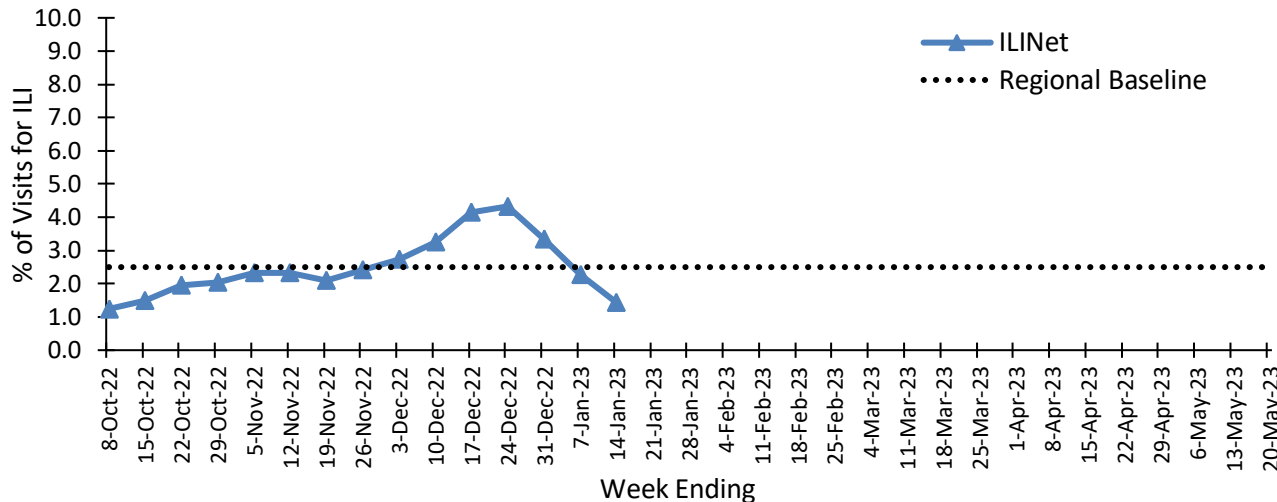

<sup>‡</sup>ILI is defined as fever (>100°F) and a cough and/or a sore throat.

### Number of Reports and ILI % by Region during this time period:

Region	C	N	SE	SW
No. of Reporters (149)	51	18	52	28
ILI %	1.5	2.6	1.3	1.1

Percentage of Visits for ILI in Michigan Reported by ILINet, 2022-2023

Note: ILINet monitors visits for ILI (fever and cough and/or sore throat) and may capture patient visits due to other respiratory pathogens that cause similar symptoms.

### Michigan ILI Activity: 1.4%

(Last week: 2.3%)

Regional Baseline\*: 2.5%

A total of **1,048** patient visits due to ILI were reported out of **73,672** outpatient visits.

\*Regional baseline is determined by calculating the mean percentage of patient visits due to ILI during non-influenza weeks for the previous three seasons and adding two standard deviations.

### National Surveillance

In the United States, **3.0%** of outpatient visits were due to ILI (Last week: **4.0%**)

This is **above** the national baseline of 2.5%

**Become an ILINET provider!**

## Influenza Hospitalization Surveillance Project (IHSP)

The CDC’s Influenza Hospitalization Surveillance Network (FluSurv-NET) provides population-based rates of laboratory-confirmed influenza-associated hospitalizations from October 1<sup>st</sup> through April 30<sup>th</sup> each year. Michigan participates as an IHSP state in FluSurv-NET for Clinton, Eaton, Genesee, Ingham, and Washtenaw Counties.

There were **29** (4 pediatric, 25 adult) influenza-associated hospitalizations reported to MDHHS for the IHSP during this time period. Since October 1<sup>st</sup>, **709** (124 pediatric, 585 adult) influenza-associated hospitalizations were reported in the catchment area for the 2022-2023 season.

IHSP Cases, 2017-18 Through 2022-2023

Washtenaw County was added in the 2017-2018 season

Note: Due to late season activity in 2022, IHSP was extended to Week 23 during the 2021-2022 season.

## Join the Influenza Sentinel Hospital Network (ISHN)!

What is it? ISHN is a group of hospitals in Michigan that voluntarily report weekly aggregate counts of influenza positive inpatients to assist MDHHS with statewide influenza surveillance.

How it works: As a participating hospital in the ISHN, you would complete a brief Survey Monkey every week containing:

- Number of hospitalizations with a positive influenza test by age group during that time period
- The total number of hospitalizations due to any condition during that time period (if available)

The data you provide will assist public health in recognizing changes in the age or geographic distribution of influenza in this population.

If your facility is interested in participating or would like more information, please contact Sue Kim ([KimS2@michigan.gov](mailto:KimS2@michigan.gov))

# Laboratory (Virologic) Surveillance

Week Ending Jan 14, 2023

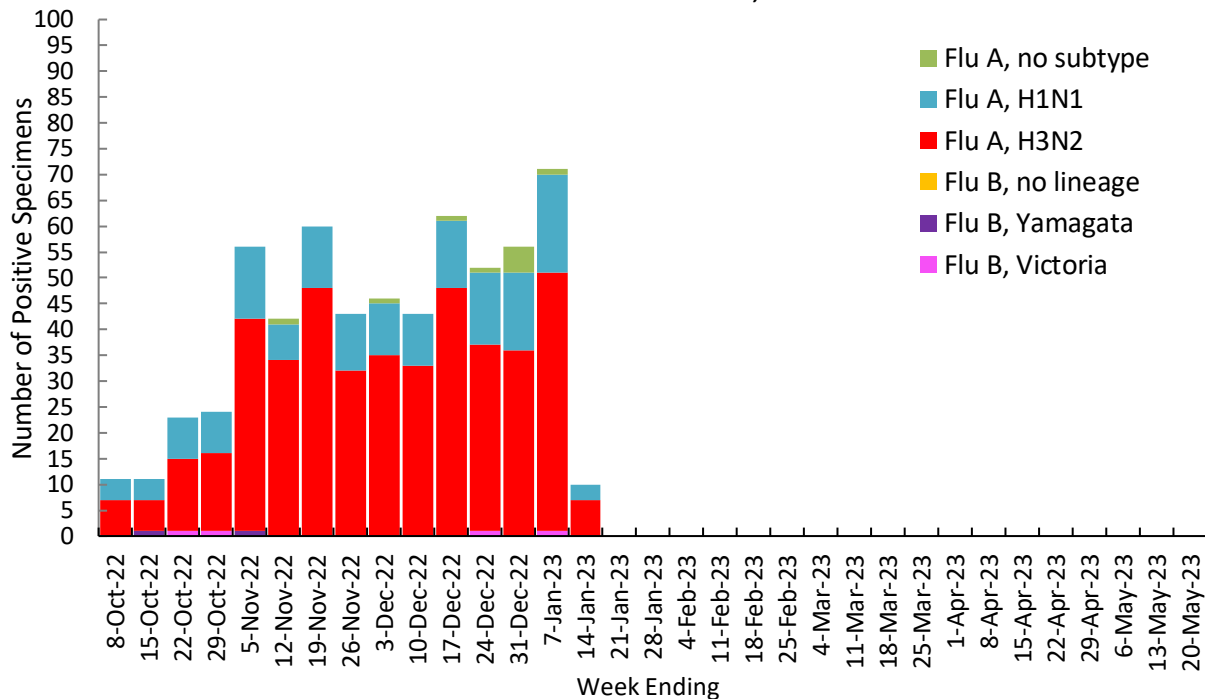

## MDHHS BOL Virology Laboratory Data

There were **10** (4C, 0N, 0SE, 6SW) positive influenza results reported by the MDHHS Bureau of Laboratories (BOL) during this time period. Positive flu results for the 2022-2023 season are summarized below.

# of Positive Influenza Virus Results by Region

	C	N	SE	SW	Total
H1N1	39	4	70	39	<b>152</b>
H3N2	89	2	172	179	<b>442</b>
Infl B	1	0	5	0	<b>6</b>
<b>Total</b>	<b>129</b>	<b>6</b>	<b>247</b>	<b>218</b>	<b>600</b>

Influenza Positive Test Results, 2022-2023

Note: Based on Specimen Collection Date. Flu B lineage data will be reported based on MDHHS BOL testing runs and will be backtracked into this graph

## Michigan Sentinel Clinical Lab Network Respiratory Virus Data

Eight (8) sentinel clinical labs (2SE, 0SW, 5C, 1N) reported for the weeks ending 1/7 - 1/14/2023.

### Southeast Region

Influenza A:	moderate
Influenza B:	sporadic
Parainfluenza:	low – slightly elevated
RSV:	moderate
Adenovirus:	elevated
hMPV:	slightly elevated

### Central Region

Influenza A:	moderate
Influenza B:	sporadic – low
Parainfluenza:	low
RSV:	elevated – moderate
Adenovirus:	low
hMPV:	low

### Southwest Region

Influenza A:	no data available
Influenza B:	no data available
Parainfluenza:	no data available
RSV:	no data available
Adenovirus:	no data available
hMPV:	no data available

### North Region

Influenza A:	slightly elevated
Influenza B:	sporadic
Parainfluenza:	low
RSV:	slightly elevated
Adenovirus:	sporadic – low
hMPV:	sporadic – low

There were 6 (2C, 0N, 3SE, 1SW) influenza outbreaks reported to MDHHS during this time period. Influenza outbreaks for the 2022-2023 season are summarized below.

# of Influenza Outbreaks by MI Region

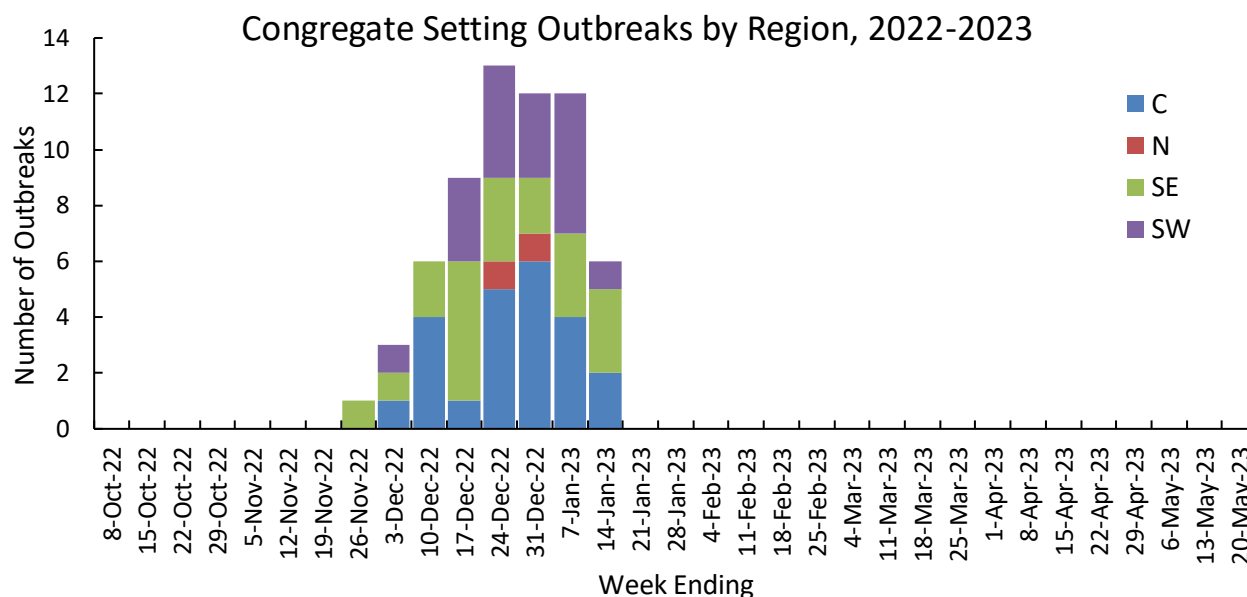

Facility Type	C	N	SE	SW	Total
Schools: K-12 & College	2	0	7	0	9
Long-term Care / Assisted Living Facility	20	2	11	14	47
Healthcare Facility	0	0	1	1	2
Daycare	0	0	0	0	0
Homeless Shelter	0	0	0	0	0
Correctional Facility	1	0	1	2	4
Other	0	0	0	0	0
<b>Total</b>	<b>23</b>	<b>2</b>	<b>20</b>	<b>17</b>	<b>62</b>

### Did you know?

Congregate setting outbreaks of viral respiratory illness are required to be reported to your local health department? See:

- [Influenza Guidance for Healthcare Providers](#)
- [Guideline for influenza and Respiratory Virus Outbreaks in Long-Term Care Facilities](#)
- [NEW! Respiratory Virus Outbreaks in Nursing Homes Flow Diagram](#)

Note: Data are reported on laboratory confirmed influenza outbreaks. Non-flu, non-COVID outbreaks and ILI outbreaks without confirmatory flu testing are not reported in the table and graph. **Mixed outbreaks with confirmed flu (including COVID) will be included in the table and graph. There were 2 mixed outbreaks reported during this time period.**

## HHS expands access to scarce flu antiviral drug Tamiflu

The US Department of Health and Human Services (HHS) is [expanding access](#) of a flu antiviral drug called oseltamivir, otherwise known as Tamiflu, utilizing pandemic stockpiles due to shortages reported throughout the country.

It has been reported that the shortages resulted from the early surge of flu activity this flu season. Throughout the country, [high influenza activity](#) has been detected using multiple surveillance indicators. Michigan is currently reporting low to moderate flu activity which is a decline in activity from December 2022 when the state experience high levels of flu activity. The Centers for Disease Control and Prevention (CDC) issued guidance on the use of Tamiflu on December 16<sup>th</sup> informing providers that the antiviral should be prioritized for flu patients who are at the highest risk of severe flu disease and those who are hospitalized.

HHS through the Administration for Strategic Preparedness and Response (ASPR), said that states, territories, and tribal health centers can work through their ASPR regional teams to access Tamiflu from their state stockpiles, and then, if those supplies are exhausted, through the Strategic National Stockpile. Along with this new guidance, states are able to utilize the Tamiflu in their state stockpiles that was previously reserved for a pandemic flu.

Manufacturers continue to report they are running manufacturing facilities 24-7 to address the high demand and have encouraged the public to buy only what they need.

For more information, read the full interim guidance for clinicians to prioritize antiviral treatment of influenza in the setting of reduced availability of oseltamivir guidance from CDC [here](#).

## 2022-2023

### Influenza Season Preliminary Burden Estimates

The Centers for Disease Control and Prevention (CDC) have released [preliminary in-season burden estimates](#) for the 2022-2023 flu season.

CDC estimates that, from **October 1, 2022 through January 14, 2023** there have been:

- **25 million – 50 million** flu illnesses
- **12 million – 24 million** flu medical visits
- **270,000 – 600,000** flu hospitalizations
- **17,000 – 52,000** flu deaths
